1. 上記科目の単位数を合わせて16単位以上を修得すること。(自専攻の学際基盤科目から4単位以上履修すること。ただし、特別講義B、特別研修B及び他専攻・他研究科の関連科目の内から4単位以上を選択履修することもできる)

Students must acquire 16 or more credits from the subjects above.(Students must acquire 4 or more credits from the Interdisciplinary Basic subjects of their own department, and can also select 4 or more credits from Special Lecture on Mechanical Systems Engineering B, Advanced Seminar on Mechanical Systems Engineering B and Related subjects of other departments or other schools.)

2. 『開講時期』については、現時点におけるものであり、変更になることもある。開講年度等は授業時間割等で確認すること。

"Class Schedule" is currently tentative and may be subject to change.

Make sure to check the fiscal years when each class is offered with the time schedule of the classes, program syllabus, etc.

3. 『使用言語』欄のアルファベット記号について (Language key)

E: 英語開講科目 (Lectures given in English)

JE: 準英語開講科目 (Lectures given in Japanese, with English explanations)

J: 日本語開講科目 (Lectures given in Japanese)

<p>Management of Research and Development 2 credits</p> <p>Elective Required Professor Hideo Miura Professor Yutaka Watanabe</p> <p>The important skills for the effective and rational management of research and development in scientific and technological fields are lectured. Most important issue is how to propose a new R&D project for the human societies near future. Not only the personal skills but also the trend of the science and technology policies all over the world will be discussed. Group discussion for proposing a new R&D project is the most important part of this intensive course for training the management skill of each student. Students are expected to learn the basic important way of thinking for the management of research and development project from the viewpoints of top leader, middle manager, and personal researcher. The most important issue is to be aware of indispensable skills which each student should improve during her/his student life to be a leader of a certain research project near future. This intensive course consists of 3 days. Group discussion often continues to midnight of the second day. Students are expected to attend the three-straight-day course fully.</p>	<p>History of Modern Technology 2 credits</p> <p>Elective Required Professor Shuji Tanaka</p> <p>Learning the history of technology leads to understanding the origin and genealogy of the technology, the inevitable factors of technological development, the relationship between society and the technology, the process and consequence of try-and-errors, the successes and failures of engineers and researchers etc. This intensive class introduces the development and partially decline of familiar devices and technologies such as automobile engines, memory devices, communication tools and semiconductor integrated circuits. The history of each technology includes the philosophy and lessons which are also useful for other research and development, and thus attendee are expected to consider them for their doctoral theses and future research and development. The lectures are partially given by visiting lecturers, and fully given in Japanese.</p>
<p>Venture Management 2 credits</p> <p>Elective Required Professor Shuichi Ishida</p>	<p>Venture Strategy 2 credits</p> <p>Elective Required Adjunct Instructor Toru Degawa Adjunct Instructor Takumi Kumagai</p>
<p>Nano-Photonic Mechanical Systems 2 credits</p> <p>Elective Required Professor Kazuhiro Hane Professor Yoshiaki Kanamori</p> <p>The research field of Mechanical engineering extends to micro/nano scale science and technology. Optical technology is indispensable for investigation and control in micro/nano regions. In this lecture, interactions between photons and atoms/molecules, principles of lasers and their systems, and photonic devices using nano/micro structures are explained and discussed.</p>	<p>Advanced Mechanics of Materials 2 credits</p> <p>Elective Required Professor Hitoshi Soyama Professor Hironori Tohmyoh</p> <p>Lecture will deal with methodological explorations about extension of life time and enhancement of strength of various materials systems from small systems such as IC packages to large mechanical components and structures, in order to use the systems at severe conditions and/or long time. Microscopic key factors of functional characteristics and performance of the systems are variety of atoms and molecules, their sequences in nanoscale and microstructure in meso-scale. On the basis of these factors, analysis of microscopic characteristics and effects of the microscopic characteristics on macroscopic characteristics will be reviewed including their measurement and evaluation methods, and some real examples will be described in the lecture.</p>
<p>Advanced Nano/Technology 2 credits</p> <p>Elective Required Professor Gao Wei Professor Koshi Adachi</p>	<p>Strength and Reliability of Advanced Materials 2 credits</p> <p>Elective Required Professor Hideo Miura</p> <p>This course gives students important hints for designing highly functional and highly reliable thin-film devices based on the discussion of the reason for the wide variation of physical and chemical properties of thin-film materials and how to control them. Main topics are as follows. 1) Nano- and Micro-texture-induced variation and fluctuation of physical and chemical properties of materials, 2) Crystallinity-induced changes of electronic and optical performances of thin-film devices, and 3) Degradation of the performances due to the strain-induced anisotropic acceleration of atomic diffusion of component elements in materials.</p>

<p>Nano-Flow Science 2 credits</p> <p>Elective Required Professor Seiji Samukawa Associate Professor Takashi Tokumasu</p> <p>To realize higher performance and lower energy consumption of advanced green nano-devices such as ULSI, TFT, MEMS/NEMS, sensors, optical devices, solar cells, secondary batteries, thermoelectric conversion devices, and so on, a process technology with atomic-layer-level control of device materials and structure is inevitable. Process technologies (such as etching, thin film deposition, surface modification) are basis of nanotechnology and are realized by utilization and control of plasma, beam, bio-molecules, and so on. This course will introduce the principle of these nano-processes which is needed for research and development of green nano-devices. Examples of devices fabricated by these processes are also introduced.</p>	<p>Advanced Intelligence and Systems Engineering 2 credits</p> <p>Elective Required Professor Kazuo Hokkirigawa Associate Professor Takeshi Yamaguchi</p> <p>In order to realize significant increase in performance of mechanical systems such as micro-machine, robots, and space equipment, it is necessary to develop new materials and to establish new design approaches using the materials. This course will provide all students with the fundamental technologies for material development and the advanced knowledge and concept associated with intelligence and systems engineering.</p>
<p>Fracture Mechanics and Mechanisms 2 credits</p> <p>Elective Required Professor Kazuhiro Ogawa Associate Professor Yoichi Takeda</p> <p>Although a fracture is a well-known phenomenon since early times, the unsolved problem has been left because of the diversity of the influential factors. Therefore, the elucidation of fracture mechanics and mechanisms are desired. For the elucidation of fracture mechanics and mechanisms, it is necessary that understanding of the interaction and synergistic effect of the diversified influential factors. In this lecture, fractures of the structures, which are induced by high-temperature oxidation and the environmental assisted cracking, are lectured. Moreover, examples of failure accidents in structures and materials are introduced, its suppression and prevention techniques are discussed.</p>	<p>Advanced Bio-Nanotechnology 2 credits</p> <p>Elective Required Professor Matsuhiko Nishizawa Professor Tetsu Tanaka Associate Professor Takafumi Fukushima</p> <p>Recent trends and perspective on Bio-nanotechnology, including the progress in micromachining techniques and LSI techniques, will be lectured in order to educate ability for engineering innovative devices for advanced medicines.</p>
<p>Special Lecture Series on Integrated Biomechanics II 2 credits</p> <p>Elective Required Professor Yoichi Haga Professor Takuji Ishikawa Professor Makoto Ohta Associate Professor Makoto Kanzaki</p>	<p>Intelligent Mechanosystem Engineering 2 credits</p> <p>Elective Required Professor Toshiyuki Hayase Associate Professor Kenichi Funamoto</p> <p>Intelligent mechano-systems are generally modeled as infinite dimensional nonlinear dynamical systems. As a basis of modern control theory to deal with such systems, we first summarize contents of Intelligent mechano-system Analysis in Masters course focused on the basic concepts of function spaces and optimization theory in Hilbert space, and then study basic concepts to understand more general optimization theories in Banach space such as dual spaces, linear operators, adjoints, from intuitive geometrical point of view.</p>
<p>Advanced Finemechanics 2 credits</p> <p>Elective Required Professors of Finemechanics</p> <p>This course is prepared for learning various subjects and topics related to the specific field of Finemechanics.</p>	<p>IMAC-G Special Seminar on Finemechanics 2 credits</p> <p>Elective Required</p> <p>This seminar is prepared for learning various subjects and topics related to the specific field of the course.</p>
<p>Special Lecture on Finemechanics B 1~4 credits</p> <p>Elective Required</p> <p>A special lecture on leading-edge academic research in the major area, or on the creation and development of knowledge in relation to the major area.</p>	<p>Advanced Seminar on Finemechanics B 1~4 credits</p> <p>Elective Required</p> <p>The problem-posing ability is acquired by integrating advanced expertise through the training.</p>

Doctor Course Seminar on Finemechanics 8 credits

Required

Students engage in experiments and seminars, including research presentations, discussion and literature reviews.

JE: 準英語開講科目(Lectures given in Japanese, with English explanations)

J: 日本語開講科目(Lectures given in Japanese)

<p>Management of Research and Development 2 credits</p> <p>Elective Required Professor Hideo Miura Professor Yutaka Watanabe</p> <p>The important skills for the effective and rational management of research and development in scientific and technological fields are lectured. Most important issue is how to propose a new R&D project for the human societies near future. Not only the personal skills but also the trend of the science and technology policies all over the world will be discussed. Group discussion for proposing a new R&D project is the most important part of this intensive course for training the management skill of each student. Students are expected to learn the basic important way of thinking for the management of research and development project from the viewpoints of top leader, middle manager, and personal researcher. The most important issue is to be aware of indispensable skills which each student should improve during her/his student life to be a leader of a certain research project near future. This intensive course consists of 3 days. Group discussion often continues to midnight of the second day. Students are expected to attend the three-straight-day course fully.</p>	<p>History of Modern Technology 2 credits</p> <p>Elective Required Professor Shuji Tanaka</p> <p>Learning the history of technology leads to understanding the origin and genealogy of the technology, the inevitable factors of technological development, the relationship between society and the technology, the process and consequence of try-and-errors, the successes and failures of engineers and researchers etc. This intensive class introduces the development and partially decline of familiar devices and technologies such as automobile engines, memory devices, communication tools and semiconductor integrated circuits. The history of each technology includes the philosophy and lessons which are also useful for other research and development, and thus attendee are expected to consider them for their doctoral theses and future research and development. The lectures are partially given by visiting lecturers, and fully given in Japanese.</p>
<p>Venture Management 2 credits</p> <p>Elective Required Professor Shuichi Ishida</p>	<p>Venture Strategy 2 credits</p> <p>Elective Required Adjunct Instructor Toru Degawa Adjunct Instructor Takumi Kumagai</p>
<p>Advanced Aero Systems I 2 credits</p> <p>Elective Required Professor Keisuke Sawada Professor Keisuke Asai Professor Tomonaga Okabe Professor Soshi Kawai</p> <p>This course covers computational methods used in aerospace engineering problems and includes the following topics:</p> <ol style="list-style-type: none"> 1. Introduction to the continuum mechanics for the application of structural analysis and computational fluid dynamics 2. Finite element methods for structural analysis and nonlinear problems. 3. Mathematical foundations of modern computational fluid dynamics and the application to aircraft design processes. 4. Mathematical formulation of multidisciplinary design problems and overview of gradient-based and gradient-free algorithms. 5. Dynamic mode decomposition for modelling of complex and interactive problems. 	<p>Advanced Aero Systems II 2 credits</p> <p>Elective Required Professor Keisuke Sawada Professor Keisuke Asai Professor Tomonaga Okabe Professor Soshi Kawai</p> <p>This course provides the topics of advanced fluid mechanics researches in aerospace engineering and its related fields, such as aircraft aerodynamic design processes, etc., to study the existing advanced knowledge and remaining issues in the areas of fluid mechanics. The topics will broadly include numerical and experimental researches in fluid mechanics and also how the fluid mechanics researches apply to the aircraft design processes. Students are expected to acquire the ability of problem finding and setting as a doctoral course student through the various topics of fluid mechanics researches provided.</p>

<p>Advanced Space Systems I 2 credits</p> <p>Elective Required Professor Kazuya Yoshida Professor Nofumi Ohnishi Professor Kanjuro Makihara Associate Professor Toshinori Kuwahara</p> <p>This course covers advanced issues on space flight systems, which are useful for elaborating PhD level studies of space engineering: •The scope of the course is the design, development, launch and operation of space flight systems for Earth-orbiting missions and/or interplanetary missions. •Depending on the availability of the lecturers, a specific focus will be made on the topics from propulsion systems, space structures, orbital mechanics, attitude dynamics and control, and space robotics. •Lectures can be conducted by invited international lectures. •All lectures are given in English.</p>	<p>Advanced Space Systems II 2 credits</p> <p>Elective Required Professor Kazuya Yoshida Professor Nofumi Ohnishi Professor Kanjuro Makihara Associate Professor Toshinori Kuwahara</p> <p>This course provides extensive advanced lectures on space flight systems, particularly the issues not covered by Advanced Space Systems I: •The scope of the course is the design, development, launch and operation of space flight systems for Earth-orbiting missions and/or interplanetary missions. •Depending on the availability of the lecturers, a specific focus will be made on the topics from propulsion systems, space structures, orbital mechanics, attitude dynamics and control, and space robotics. •Lectures can be conducted by invited international lectures. •All lectures are given in English.</p>
<p>Advanced Space Fluid Dynamics 2 credits</p> <p>Elective Required Professor Hiroki Nagai Professor Shigeru Obayashi Professor Hideaki Kobayashi</p> <p>From the aerospace engineering and the related fields, this lecture delivers extensive and deep technical knowledge about the extreme flows such as the hypersonic flow, propulsion of the spacecraft, flows with various flights, supersonic combustion. The principal objective of the lecture is the cultivation of the ability of the doctoral course students for problem discovery and proposition of a new solution method.</p>	<p>Advanced Mechanical Systems and Design 2 credits</p> <p>Elective Required Professors of Mechanical Systems and Design course</p> <p>This course is prepared for learning various subjects and topics related to the specific field of mechanical systems and design course. The scope covers wide fields related to mechanical system technologies, including intelligent system, engineering design, energy system, and multidisciplinary fields.</p>
<p>IMAC-G Special Seminar on Aerospace Engineering 2 credits</p> <p>Elective Required This seminar is prepared for learning various subjects and topics related to the specific field of the course.</p>	<p>Special Lecture on Aerospace Engineering B</p> <p>Elective Required A special lecture on leading-edge academic research in the major area, or on the creation and development of knowledge in relation to the major area.</p>
<p>Advanced Seminar on Aerospace Engineering B</p> <p>Elective Required The problem-posing ability is acquired by integrating advanced expertise through the training.</p>	<p>Doctor Course Seminar on Aerospace Engineering 8 credits</p> <p>Required Students engage in experiments and seminars, including research presentations, discussion and literature reviews.</p>
