Language Key

E:英語開講科目（Lectures given in English）

JE:準英語開講科目（Lectures basically given in Japanese, with English explanations）

J:日本語開講科目（Lectures given in Japanese）

History of Modern Technology 2 credits

Elective Required

Professor Shuji Tanaka

Learning the history of technology leads to understanding the origin and genealogy of the technology, the inevitable factors of technological development, the relationship between society and the technology, the process and consequence of try-and-errors, the successes and failures of engineers and researchers etc. This intensive class introduces the development and partially decline of familiar devices and technologies such as automobile engines, memory devices, communication tools and semiconductor integrated circuits. The history of each technology includes the philosophy and lessons which are also useful for other research and development, and thus attendee is expected to consider them for their doctoral theses and future research and development. The lectures are partially given by visiting lecturers, and fully given in Japanese.

New Business Creation 2 credits

Elective Required

Professor Shuichi Ishida

This course covers business creation theory based on business administration from theoretical and case study perspectives. The domain extends not only to management strategy but also to entrepreneurship theory. The course is designed to be accessible to engineering graduate students who have never studied business administration.

Venture Strategy 2 credits

Elective Required

Nano Magnetism and Magnetic Engineering 2 credits

Elective Required

Professor Daichi Chiba

Associate Professor Hikaru Nomura

Magnetic materials are essential to human life, such as motors and electrical generators. As magnetic materials become nanoscale, their functionality expands and they are widely used in applications such as magnetic recording and magnetic field sensing. In recent years, magneto-elastic effects in nanomagnets have been found efficient for sensitive sensing of mechanical motions, and the connection between nanomagnets and mechanics is attracting attention. In this lecture, students will learn the fundamental properties of magnetic materials and their characteristics, and gain a broad knowledge of physical phenomena and applications in spintronics, a field of study in which nanomagnets are used for research and development. This lecture will be given in a face-to-face style with some exercises.

Advanced Intelligent Design 2 credits

Elective Required

Professor Takahito Ono

Professor Masayoshi Mizutani

Nanotechnology-based nano-precision mechanical manufacturing and micro-nanomachining, and integration technologies of various components are lectured. Precision machines based on above technologies and micro-nanomachines, the design and modeling of those mechanical elements, recent research on applications to information technologies, energy, and medical fields are also lectured.

Advanced Energy Systems Engineering 2 credits

Elective Required

Professor Hiroo Yugami

Professor Tetsushi Biwa

Professor Masaya Shigeta

Associate Professor Makoto Shimizu

This course provides students with deep knowledge on the broad topics selected from energy conversion engineering and related fields, such as the control and application methods of heat and fluid energy, as well as renewable energy technology and thermoacoustics. Students will acquire the ability to find out the problems and to pursue the solutions through this lecture.

Fracture Mechanics and Mechanisms 2 credits

Elective Required

Professor Kazuhiro Ogawa

Associate Professor Yoichi Takeda

Although a fracture is a well-known phenomenon since early times, the unsolved problem has been left because of the diversity of the influential factors. Therefore, the elucidation of fracture mechanics and mechanisms are desired.
For the elucidation of fracture mechanics and mechanisms, it is necessary that understanding of the interaction and synergistic effect of the diversified influential factors.
In this lecture, fractures of the structures, which are induced by high-temperature oxidation and the environmental assisted cracking, are lectured. Moreover, examples of failure accidents in structures and materials are introduced, its suppression and prevention techniques are discussed.

Intelligent Fluid Systems 2 credits

Elective Required

Professor Kaoru Maruta

Professor Takehiko Sato

Professor Atsuki Komiya

Fundamentals and applications for intelligent control of thermo-fluid flows under the various conditions including microgravity and electro-magnetic field, and its optimized simulation method are discussed. The construction of intelligent fluid systems with sensing, processing, control and actuation and its applications to energy conversion, plasma medicine and material processing are discussed.
Prof. K. Maruta: Fundamental and applications of combustion dynamics
Prof. T. Sato: Plasma medicine and plasma flows
Prof. A. Komiya: Sensing and control of micro-nano scale thermos-fluid flows.

Advanced Mechanical Systems Maintenance Engineering 2 credits
Elective Required
Professor Tetsuya Uchimoto

Maintenance activities play an important role to secure the safety and long-life of various artifacts such as industrial plants, commercial aircrafts. Optimization of the maintenance activities in view of both system safety and economic performance is placed as a major key challenge. In this course, we outline recent progresses of disciplines composing maintenance engineering such as reliability engineering, risk evaluation, nondestructive testing, failure analysis, at first. In addition, we discuss the quantitative evaluation of reliability and risk for optimization of the maintenance activities such as inspection and repair.

Multidisciplinary Research and Application of Solid-State Ionic Devices 2 credits
Elective Required
Professor Koji Amezawa

In this lecture, topics related to basics and applications of ion transport phenomena in solids and on solid surface and/or interface are introduced and discussed from the viewpoints of materials chemistry and solid-state physics. More details, such as the style of the lecture, will be announced in the beginning of the semester.

Advanced Nano/Technology 2 credits
Elective Required
Professor Gao Wei
Professor Koshi Adachi

This course focuses on two main fields of nanotechnologies. The first field is tribology, which is the technical and scientific aspect of contact surface. Fundamental of tribology and tribological performance of the contact surface will be taught in the class. The second field is nanometrology, which is the science of measurement in the nanometric scale. The fundamental and systems of nanometrology based on optics will be introduced.

Advanced Bio-Nanotechnology 2 credits
Elective Required
Professor Matsuhiko Nishizawa
Professor Tetsu Tanaka
Associate Professor Takafumi Fukushima

Recent trends and perspective on Bio-nanotechnology, including the progress in micromachining techniques and LSI techniques, will be lectured in order to educate ability for engineering innovative devices for advanced medicines.

Special Lecture on Mechanical Systems Engineering B 1~4 credits
Elective Required

A special lecture on leading-edge academic research in the major area, or on the creation and development of knowledge in relation to the major area.

Special Seminar on Mechanical Systems Engineering B 1~4 credits
Elective Required
Professor Shuichi Ishida

The problem-posing ability is acquired by integrating advanced expertise through the training.

Doctoral Thesis Research in Mechanical Systems and Engineering 8 credits
Required

Students engage in experiments and seminars, including research presentations, discussion, and literature reviews.

New Business Creation 2 credits
Elective Required
Professor Shuichi Ishida

This course covers business creation theory based on business administration from theoretical and case study perspectives. The domain extends not only to management strategy but also to entrepreneurship theory. The course is designed to be accessible to engineering graduate students who have never studied business administration.

Venture Strategy 2 credits
Elective Required

Nano Magnetism and Magnetic Engineering 2 credits
Elective Required
Professor Daichi Chiba
Associate Professor Hikaru Nomura

Magnetic materials are essential to human life, such as motors and electrical generators. As magnetic materials become nanoscale, their functionality expands and they are widely used in applications such as magnetic recording and magnetic field sensing. In recent years, magneto-elastic effects in nanomagnets have been found efficient for sensitive sensing of mechanical motions, and the connection between nanomagnets and mechanics is attracting attention. In this lecture, students will learn the fundamental properties of magnetic materials and their characteristics, and gain a broad knowledge of physical phenomena and applications in spintronics, a field of study in which nanomagnets are used for research and development. This lecture will be given in a face-to-face style with some exercises.

Advanced Mechanics of Materials 2 credits
Elective Required
Professor Hitoshi Soyama
Professor Hironori Tomyoh

Lecture will deal with methodological explorations about extension of lifetime and enhancement of strength of various materials systems from small systems such as IC packages to large mechanical components and structures, in order to use the systems at severe conditions and/or long time. Microscopic key factors of functional characteristics and performance of the systems are variety of atoms and molecules, their sequences in nanoscale and microstructure in meso-scale. On the basis of these factors, analysis of microscopic characteristics and effects of the microscopic characteristics on macroscopic characteristics will be reviewed including their measurement and evaluation methods, and some real examples will be described in the lecture.

Advanced Nano/Technology 2 credits
Elective Required
Professor Gao Wei
Professor Koshi Adachi

This course focuses on two main fields of nanotechnologies. The first field is tribology, which is the technical and scientific aspect of contact surface. Fundamental of tribology and tribological performance of the contact surface will be taught in the class. The second field is nanometrology, which is the science of measurement in the nanometric scale. The fundamental and systems of nanometrology based on optics will be introduced.

Nano-Flow Science 2 credits
Elective Required
Professor Takahito Ono
Professor Takashi Tokumasu
Professor Kazuhiko Endo

To realize higher performance and lower energy consumption of advanced green nano-devices such as ULSI, TFT, MEMS/NEMS, sensors, optical devices, solar cells, secondary batteries, thermoelectric conversion devices, and so on, a process technology with atomic-layer-level control of device materials and structure is inevitable. Process technologies (such as etching, thin film deposition, surface modification) are basis of nanotechnology and are realized by utilization and control of plasma, beam, biomolecules, and so on. This

Advanced Soft Mechanics 2 credits
Elective Required
Professor Takeshi Yamaguchi

Soft materials such as polymers, rubbers, and gels are called "soft materials." They exhibit mechanical properties and functions different from those of hard materials such as metals and ceramics. In this lecture, mechanical and frictional properties of soft materials, including living body, will be discussed, and the fundamentals and advanced technologies of soft mechanics will be reviewed, including recent research, with applications in sports and medical and welfare fields as subjects.

course will introduce the principle of these nano-processes which is needed for research and development of green nano-devices. Examples of devices fabricated by these processes are also introduced.

Fracture Mechanics and Mechanisms 2 credits
Elective Required
Professor Kazuhiro Ogawa
Associate Professor Yoichi Takeda

Although a fracture is a well-known phenomenon since early times, the unsolved problem has been left because of the diversity of the influential factors. Therefore, the elucidation of fracture mechanics and mechanisms are desired.
For the elucidation of fracture mechanics and mechanisms, it is necessary that understanding of the interaction and synergistic effect of the diversified influential factors.
In this lecture, fractures of the structures, which are induced by high-temperature oxidation and the environmental assisted cracking, are lectured. Moreover, examples of failure accidents in structures and materials are introduced, its suppression and prevention techniques are discussed.

Advanced Bio-Nanotechnology 2 credits
Elective Required
Professor Matsuhiko Nishizawa
Professor Tetsu Tanaka
Associate Professor Takafumi Fukushima

Recent trends and perspective on Bio-nanotechnology, including the progress in micromachining techniques and LSI techniques, will be lectured in order to educate ability for engineering innovative devices for advanced medicines.

Special Lecture Series on Integrated Biomechanics II 2 credits
Elective Required
Professor Yoichi Haga
Professor Takuji Ishikawa
Professor Makoto Ohta
Professor Makoto Kanzaki

Understanding of living system and cell from the point of view of mechanical system. Understanding advanced research trends for the development of biology and medical applications. Modeling and analysis of living system from the point of view of mechanical system are lectured. Medical device development, design and analysis of the biological model, and functional analysis of the cell are lectured.

Intelligent Mechanosystem Engineering 2 credits
Elective Required
Professor Makoto Ohta
Associate Professor Kenichi Funamoto

To realize intelligent mechano-systems that autonomously adapt to their environment, it is essential to understand the structure and the mechanisms of sensing and decision-making of intelligent systems in living organisms. This lecture focuses on problems related to the fundamentals and applications of optimization of complex dynamic systems, and aims to develop an intuitive understanding of the most common methods of optimization theory by functional analysis.

Advanced Nano-and Micro-Surface Metrology and Engineering 2 credits
Elective Required
Professor Wataru Yashiro

Measurement and control are the two wheels of manufacturing. The aim of this lecture is to learn the most advanced measurement and control methods covering a wide range of spatial scales from atomic to macroscopic scales of surfaces and interfaces that govern the functions of materials. The ultimate goal of this course is to enable students to gain insight into the current state of measurement and control technology, its limitations, and the potential for opening up new frontiers in materials and life sciences.

Special Lecture on Finemechanics B 1~4 credits
Elective Required

A special lecture on leading-edge academic research in the major area, or on the creation and development of knowledge in relation to the major area.

Advanced Seminar on Finemechanics B 1~4 credits Elective Required The problem-posing ability is acquired by integrating advanced expertise through the training.	**Doctoral Thesis Research in Finemechanics** 8 credits Required Students engage in experiments and seminars, including research presentations, discussion, and literature reviews.

Professor Tomonaga Okabe
Professor Soshi Kawai

This course covers computational methods used in aerospace engineering problems and includes the following topics:
1. Introduction to the continuum mechanics for the application of structural analysis and computational fluid dynamics
2. Finite element methods for structural analysis and nonlinear problems.
3. Mathematical foundations of modern computational fluid dynamics and the application to aircraft design processes.
4. Mathematical formulation of multidisciplinary design problems and overview of gradient-based and gradient-free algorithms.
5. Dynamic mode decomposition for modelling of complex and interactive problems.

Advanced Aero Systems II 2 credits
Elective Required
Professor Tomonaga Okabe
Professor Soshi Kawai

This course provides the topics of advanced fluid mechanics research in aerospace engineering and its related fields, such as aircraft aerodynamic design processes, etc., to study the existing advanced knowledge and remaining issues in the areas of fluid mechanics. The topics will broadly include numerical and experimental research in fluid mechanics and how fluid mechanics research applies to aircraft design processes. Students are expected to acquire the ability to problem-finding and set as doctoral course students through the various topics of fluid mechanics research provided.

Advanced Space Systems I 2 credits
Elective Required
Professor Kazuya Yoshida
Professor Naofumi Ohnishi
Professor Kanjuro Makihara
Associate Professor Toshinori Kuwahara

This course covers advanced issues on space flight systems, which are useful for elaborating PhD level studies of space engineering:
・The scope of the course is the design, development, launch and operation of space flight systems for Earth-orbiting missions and/or interplanetary missions.
・Depending on the availability of the lecturers, a specific focus will be made on the topics from propulsion systems, space structures, orbital mechanics, attitude dynamics and control, and space robotics.
・Lectures can be conducted by invited international lectures.

Advanced Space Systems II 2 credits
Elective Required
Professor Kazuya Yoshida
Professor Naofumi Ohnishi
Professor Kanjuro Makihara
Associate Professor Toshinori Kuwahara

This course provides extensive advanced lectures on space flight systems, particularly the issues not covered by Advanced Space Systems I:
・The scope of the course is the design, development, launch and operation of space flight systems for Earth-orbiting missions and/or interplanetary missions.
・Depending on the availability of the lecturers, a specific focus will be made on the topics from propulsion systems, space structures, orbital mechanics, attitude dynamics and control, and space robotics.
・Lectures can be conducted by invited international lectures.
・All lectures are given in English.

Advanced Space Fluid Dynamics 2 credits
Elective Required
Professor Hiroki Nagai
Professor Shigeru Obayashi

From aerospace engineering and the related fields, this lecture delivers extensive and deep technical knowledge about extreme flows such as the hypersonic flow, propulsion of the spacecraft, flows with various flights. The principal objective of the lecture is the cultivation of the ability of the doctoral course students for problem discovery and the proposition of a new solution method.

Special Lecture on Aerospace Engineering B 1~4 credits
Elective Required

A special lecture on leading-edge academic research in the major area, or on the creation and development of knowledge in relation to the major area.

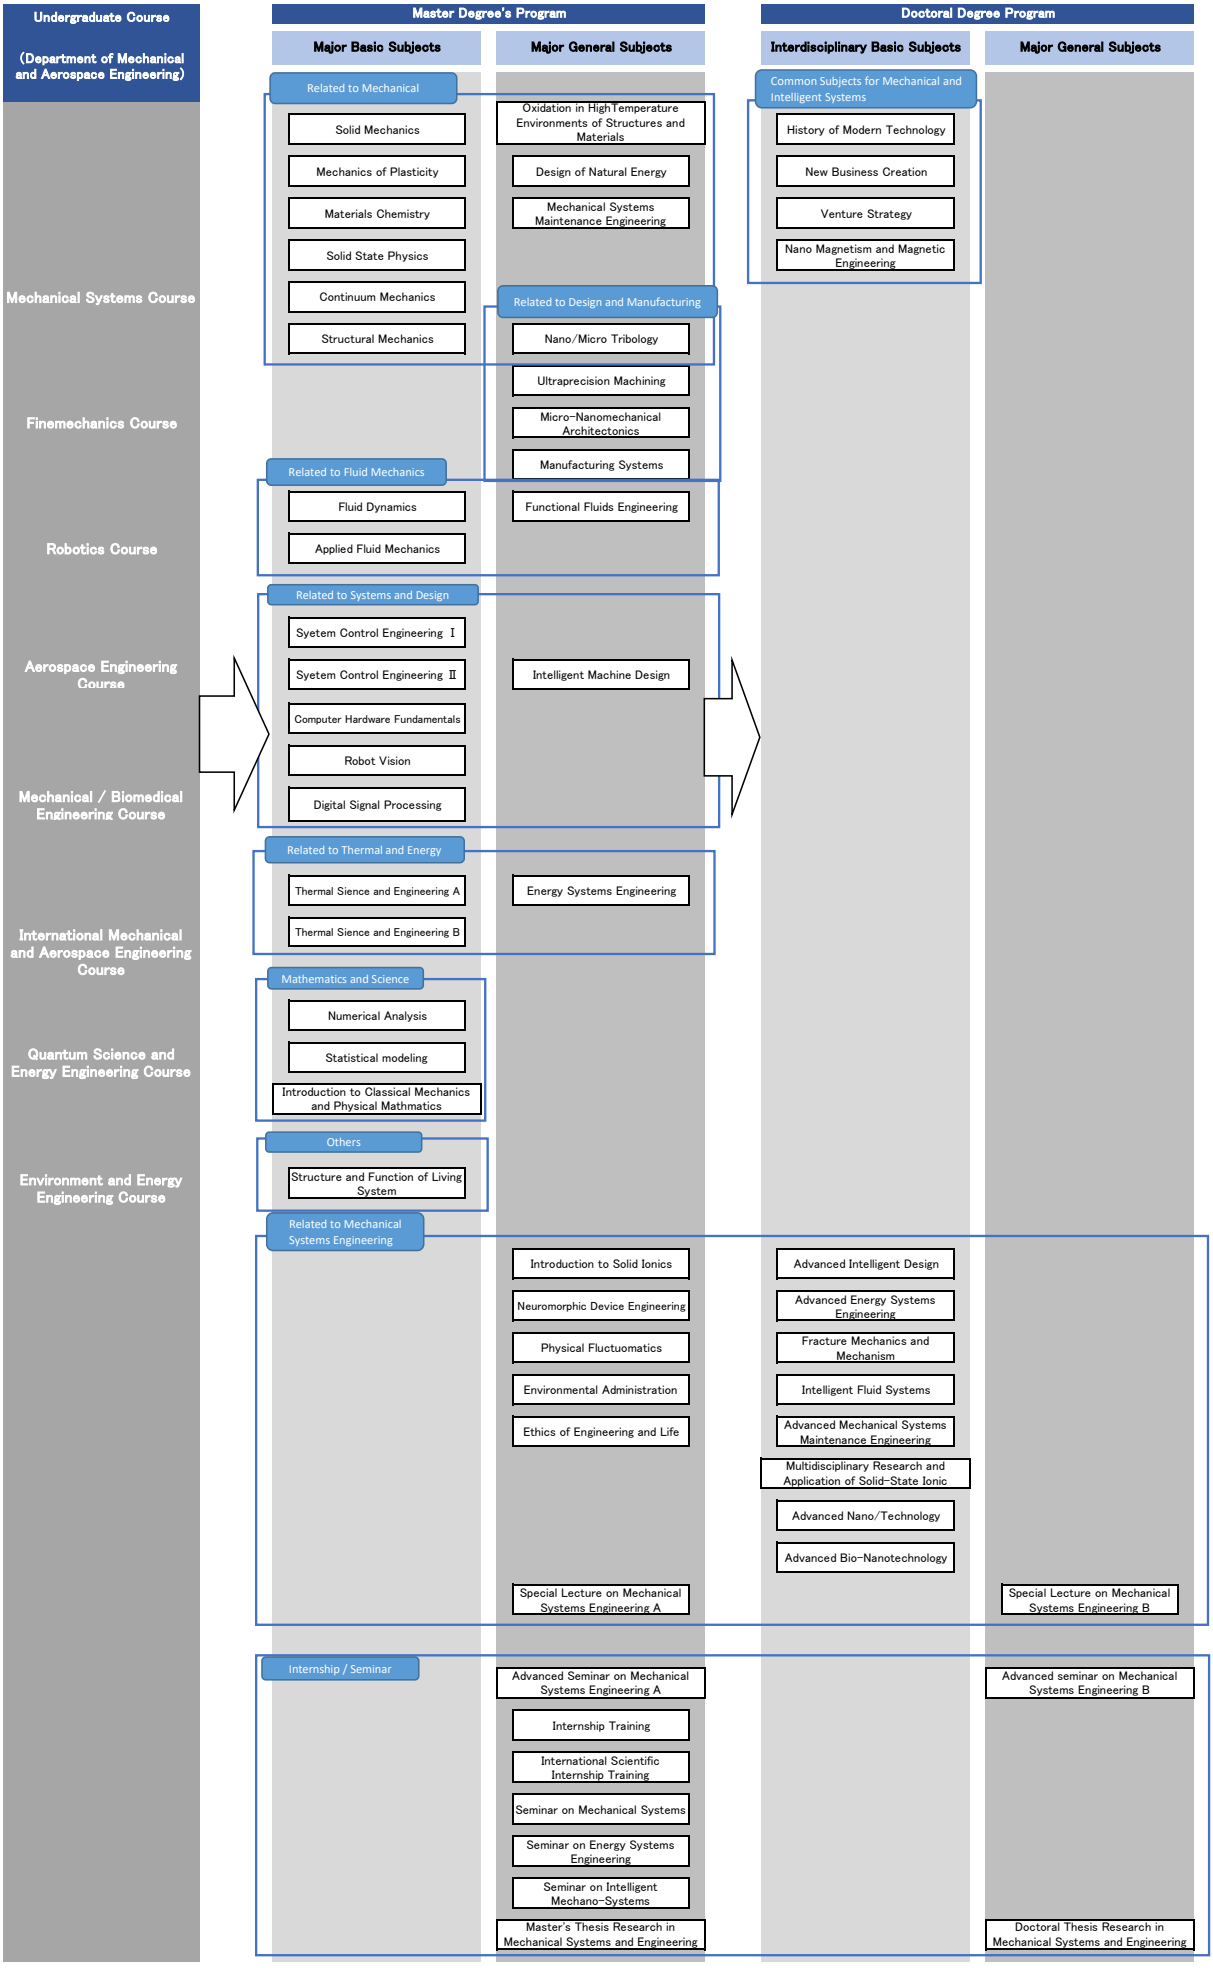
Special Seminar on Aerospace Engineering B 1~4 credits
Elective Required

The problem-posing ability is acquired by integrating advanced expertise through the training.

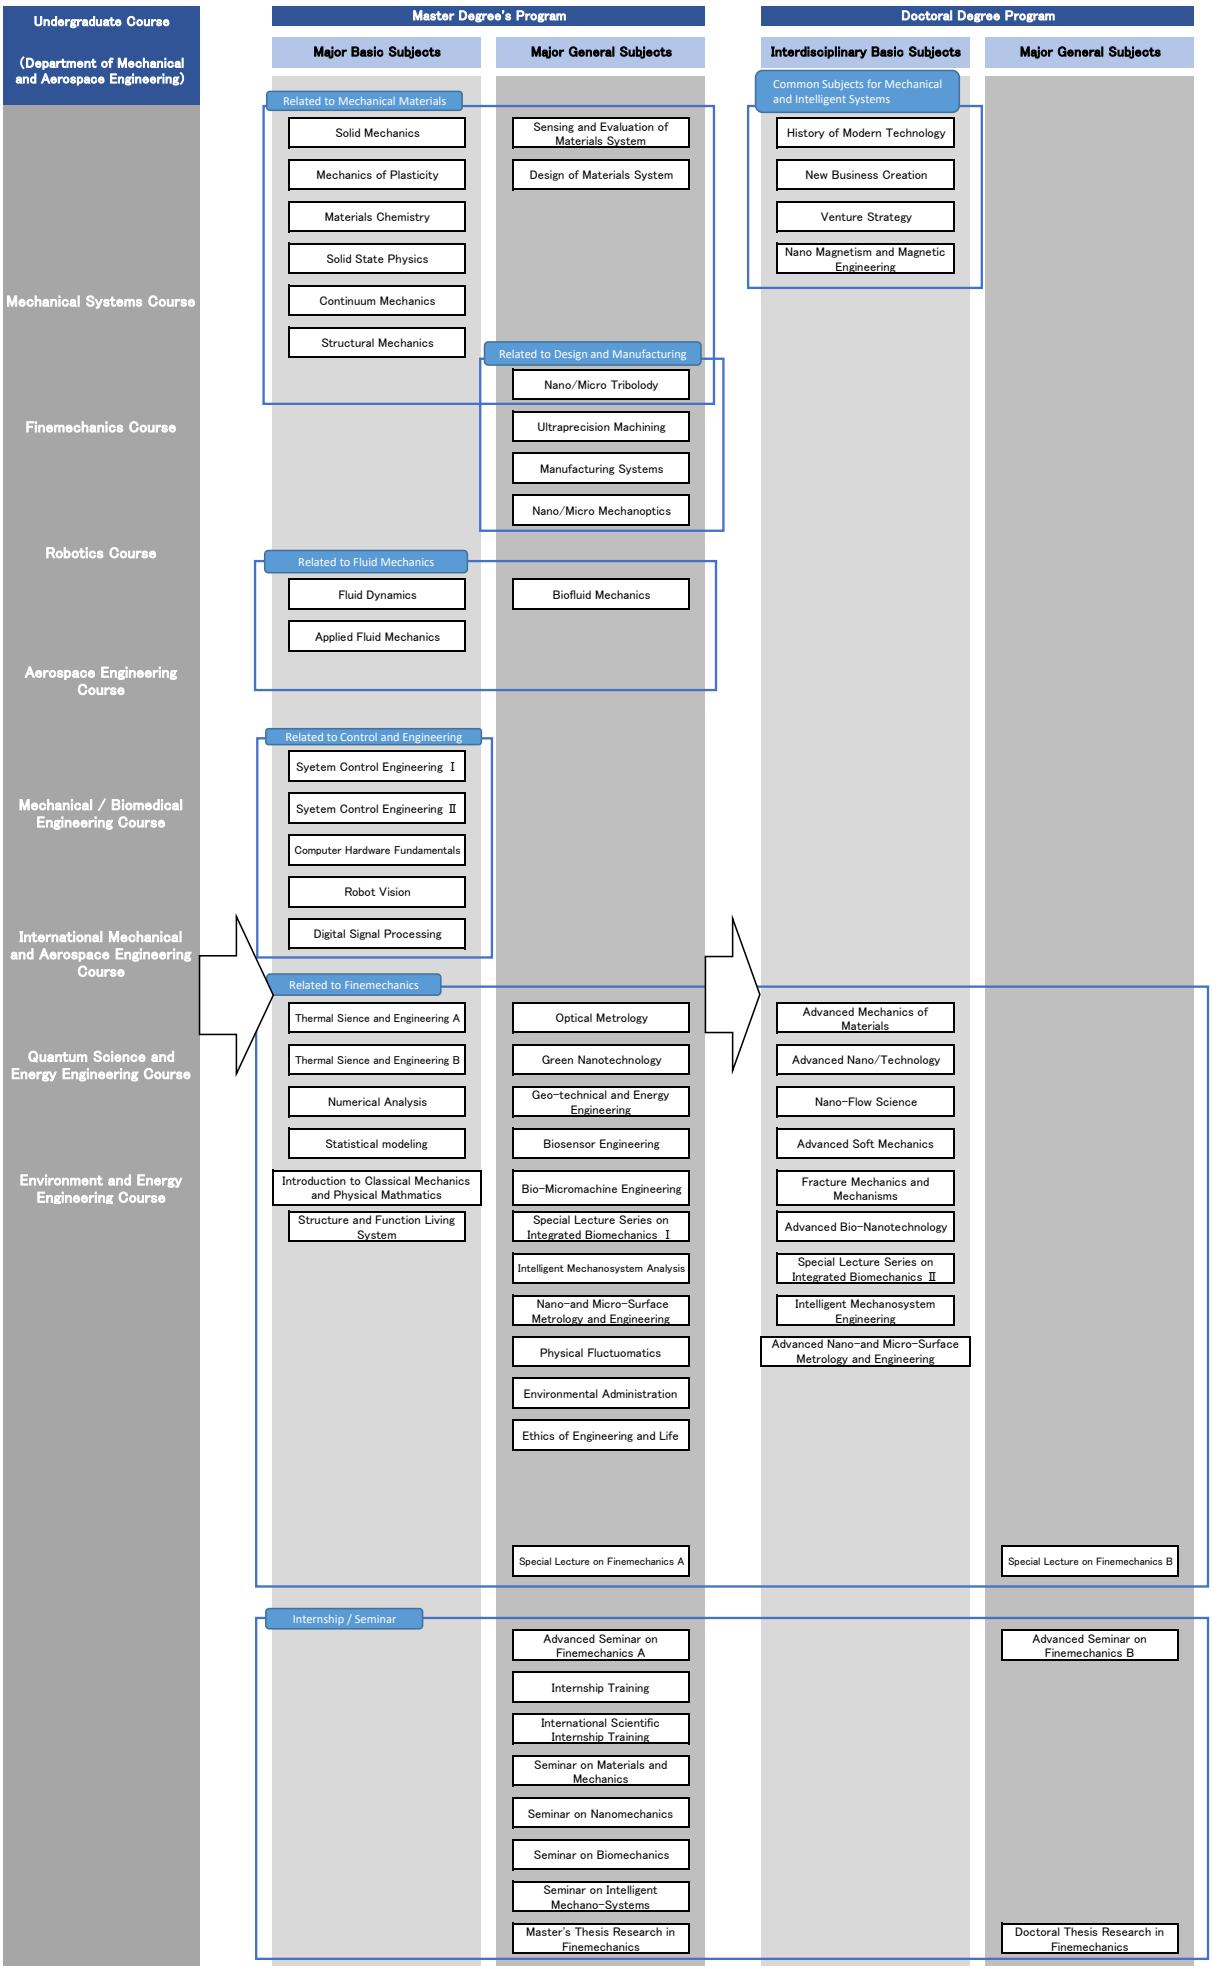
Doctoral Thesis Research in Aeronautics and Space Engineering 8 credits
Required

Students engage in experiments and seminars, including research presentations, discussion, and literature reviews.

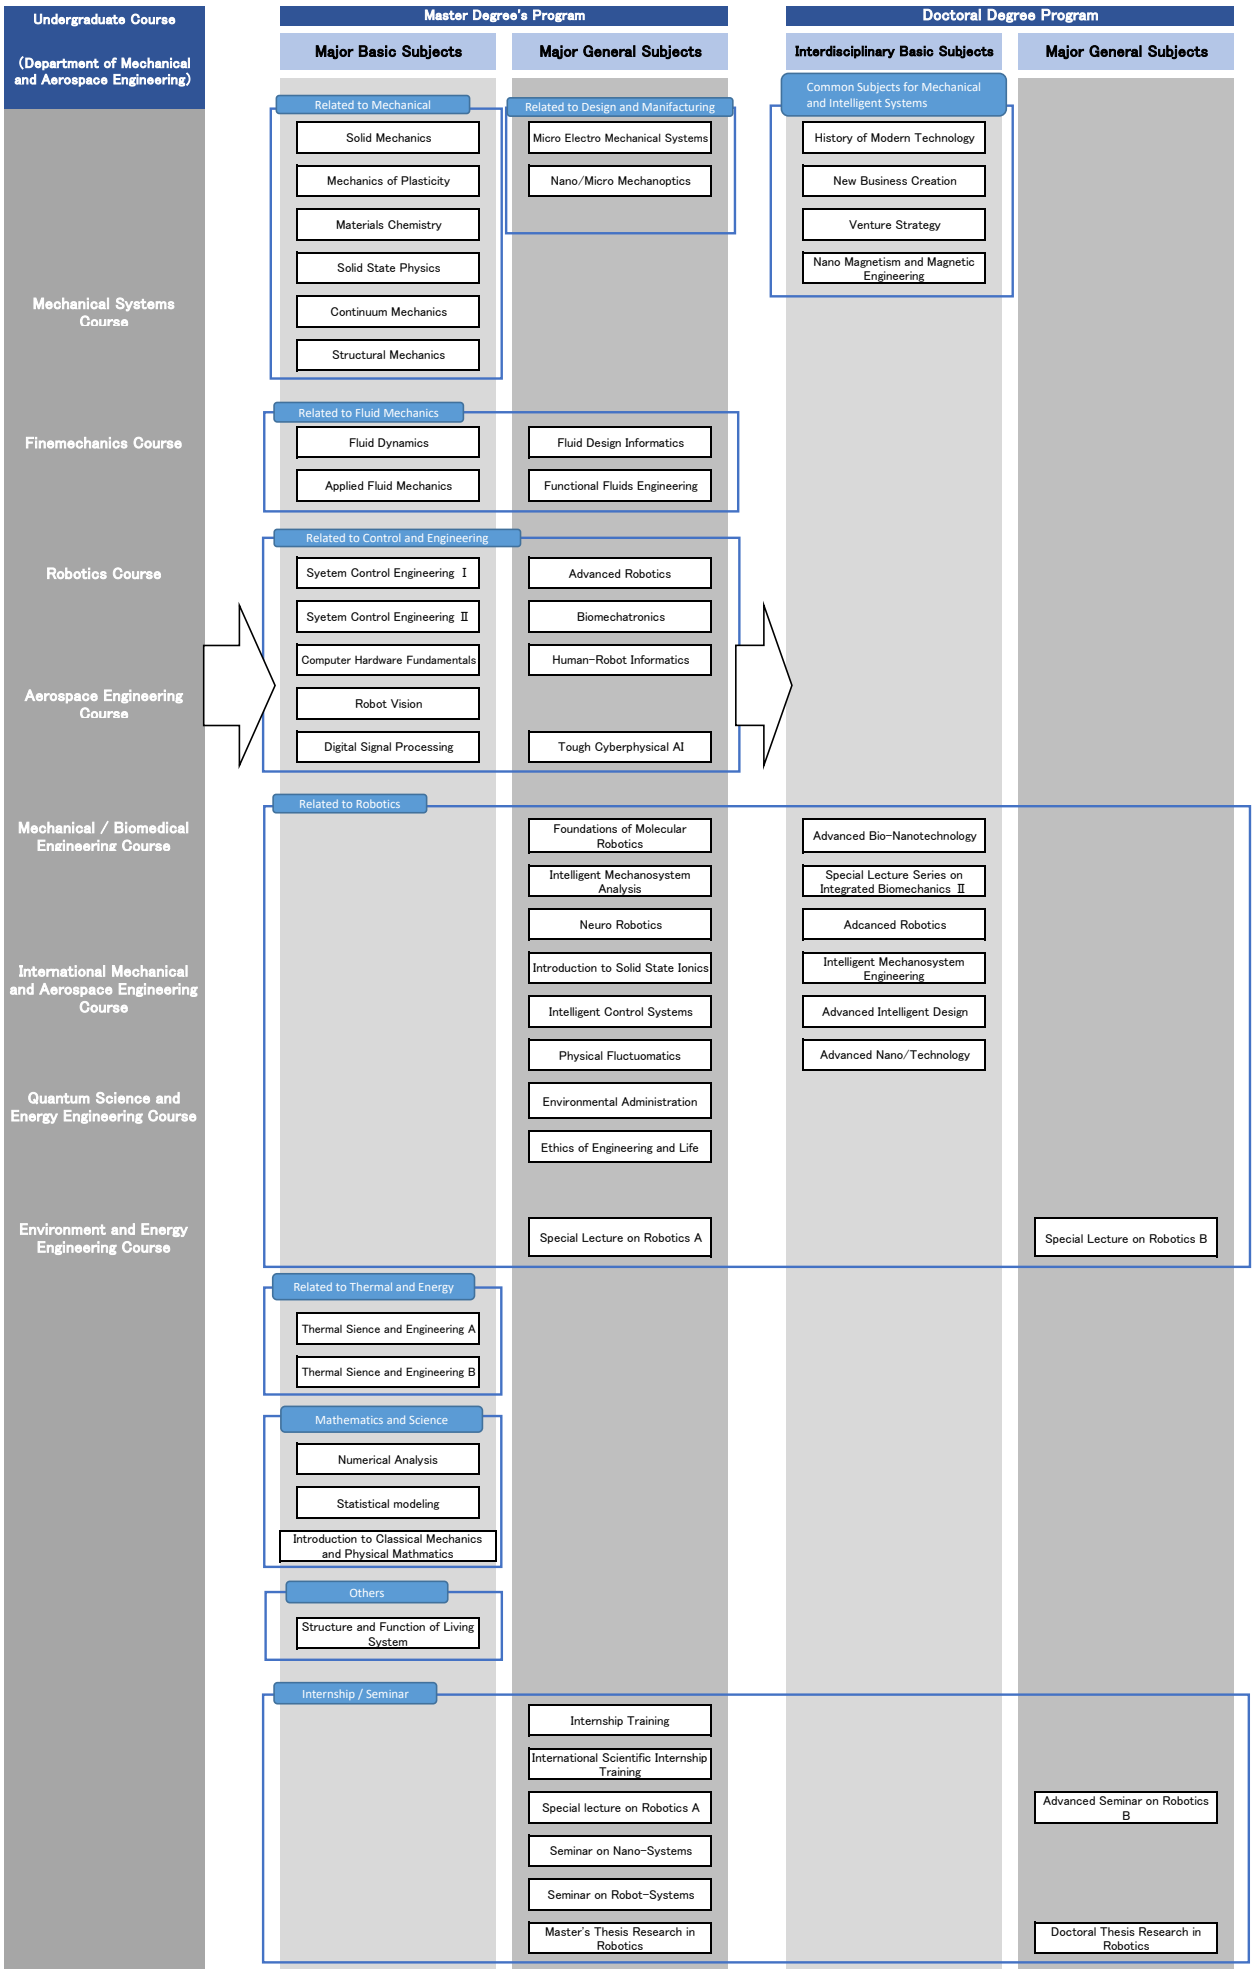
Department of Mechanical Systems Engineering



Department of Finemechanics



Department of Robotics



Department of Aerospace Engineering
